DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

3. Regarding claim 1, the phrase "or the like" renders the claim(s) indefinite because the claim(s) include(s) elements not actually disclosed (those encompassed by "or the like"), thereby rendering the scope of the claim(s) unascertainable. See MPEP § 2173.05(d).

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-13 are rejected under 35 U.S.C. 102(b) as being rejected by Schulze-Hockenbeck (EP 992187, cited by applicant).

Schulze-Hockenbeck discloses:

in re cl. 1:

at least two cutting & intake units which have a series of drum-like cutting & intake elements (fig 2);

first & second apparatus & first & second pivot (see fig 4);

in re cl. 2-3, 8:

a base cutting & intake unit with cutting & intake element in front of the harvester & extending the entire width of the harvester (fig 1)

in re cl. 4-7, 10:

first & second intermediate & outer wings on opposite later sides of the base (fig 2-4), a second axis between them is close to the ground in working position (fig 2);

in re cl. 9:

Art Unit: 3671

in the transport position (it is not claimed that both the intermediate & outer wings have to be pivoted) spaced from one another (see fig 3);

in re cl. 11-13:

the abutting rear walls of the wings in the working condition is shown in fig 5 or 6;

wherein the first pivot axis is between the rear wall of the base unit & intermediate wing.
